

Abstract

A roofing panel 110 for a pitched roof comprises a rectangular frame 111 having both faces covered in board material 116, 117, the frame 111 comprising top and bottom rails 112, 113 joined together by a plurality of composite "I" beams 10 & 41. The panel 110 is provided with elongate attachment means 101, 102 at its upper and lower ends for attachment to, for example, a roof beam 65 and guttering respectively. The attachment means 101, 102 have a right angle triangular portion with an apex angle α, β substantially equal to the pitch angle of the roof, a base side 51, 61 for securing to the top or bottom of the panel 110 and a hypotenuse 53, 63 which in use is substantially vertical.
